The Great Lakes

A Great Wind Resource

Our Mission

Harnessing the power of lake effect wind for commercial and social benefit.

Lake Effect Energy looks to bring viable urban wind energy development from concept to fruition in Western New York and beyond. We are an organization of dedicated wind energy proponents who bring a solid base of professional expertise to the task of developing wind power projects where the power of lake effect winds make the most sense, commercially and socially.

Seul Choix Point, Lake Michigan

LakeEffectEnergy LLC

Why We Are Here:

The members of Lake Effect Energy, LLC are dedicated to the idea that wind energy has the potential to power not only our homes and businesses, but also our future. Dependence on energy sources from distant places reduces our control of our own destiny. Clean energy can provide us with a clean future.

1. To continue to develop new markets for the consumption of wind power within our geographic region.
2. To create a portfolio of success that will allow us to extend our reach beyond our immediate geography and assist or drive wind development projects in other urban lake effect regions.

Our Skills:

The members of Lake Effect Energy bring skills which encompass the many disciplines necessary to succeed in this endeavor, including finance, environmental law, urban planning, science and engineering. These individual skills, coupled with strong community, government and regulatory relationships will help bring responsible wind energy development to Western New York and the Great Lakes region.

LakeEffectEnergy LLC

Our Values:

Environmental Responsibility: We believe in clean and renewable energy, brownfield reclamation, and low impact development that considers all environmental factors.

Fiscal Responsibility: Our projects must meet minimum standards for profitability with limited risk and high stability, and be able to attract qualified investors who can benefit from participation in our projects.

Economic Development: We seek to create wind power projects that aid in the economic development of the region in which they are located.

Technological Advancement: Our desire is to use cutting edge wind power technology so as to always develop economically and environmentally responsible projects that maximize the wind and land resources available. We hope that continued wind development will drive new technologies which enhance this industry and its potential to provide power to our world.

Community Consensus: Lake Effect Energy looks outside the box to ensure that urban wind power development will be embraced by the community-at-large as a positive new feature that brings significant benefit to the local region.
